STRONG INTERACTIONS OF HADRONS AT HIGH ENERGIES V. N. Gribov was one of the creators of high energy elementary particle physics and the founder of the Leningrad school of theoretical physics. **STRONG INTERACTIONS OF HADRONS**  
The strong interaction is a gauge interaction mediated by a massless, spin 1 gluon, g, which is electrically neutral but carries a composite colour such as red-blue. The coupling constant is known as  $\alpha_s$  (alpha-strong) and the theory is known as Quantum Chromodynamics or QCD in analogy with QED. Note that, unlike in QED, the exchange quantum is also a source, so processes such as the branching of one gluon into two can occur.

Hadrons. Particles that interact by the strong interaction are called hadrons. This general classification includes mesons and baryons but specifically excludes leptons, which do not interact by the strong force. The weak interaction acts on both hadrons and leptons.

**Hadrons, baryons, mesons - HyperPhysics Concepts**  
"The fundamental strong interaction holds the constituent quarks of a hadron together, and the residual force holds hadrons together with each other, such as the proton and neutrons in a nucleus."

**What Is the Strong Force? | Live Science**  
Strong interaction affects hadrons (i.e. particles made from quarks). It binds the quarks together but a residual effect of this is to bind the nucleons together in the nucleus. It is the strongest interaction but it has a very short range. To see how such interactions arise imagine two astronauts drifting slowly towards each other in space.

**Fundamental Forces and Exchange Particles | S-cool, the ...**  
String theory was originally developed during the late 1960s and early 1970s as a never completely successful theory of hadrons, the subatomic particles like the proton and neutron that feel the strong interaction.

**String theory - Wikipedia**  
In nuclear physics and particle physics, the strong interaction is the mechanism responsible for the strong nuclear force, and is one of the four known fundamental interactions, with the others being electromagnetism, the weak interaction, and gravitation. At the range of 10–15 m, the strong force is approximately 137 times as strong as electromagnetism, a million times as strong as the weak interaction, and 1038 times as strong as gravitation. The strong nuclear force holds most ordinary ...

Hadrons are subject to the strong interaction. The two classes of hadrons: baryons (proton, neutron) and antibaryons (antiproton and antineutron) mesons (pion, kaon). Baryon number as a quantum number. Conservation of baryon number. The proton is the only stable baryon into which other baryons eventually decay.

#### **Classification of particles**

In particle physics, a hadron /'hædrɒn/ is a subatomic composite particle made of two or more quarks held together by the strong force in a similar way as molecules are held together by the electromagnetic force. Most of the mass of ordinary matter comes from two hadrons: the proton and the neutron. Hadrons are categorized into two families: baryons, made of an odd number of quarks – usually three quarks – and mesons, made of an even number of quarks—usually one quark and one ...

These particles interact through strong force to form larger particles known as hadrons and hadrons have integer number charge. Basically, quarks combine with quarks itself or with anti-quarks, to form stable hadrons. Three main categories of hadrons are baryons, antibaryons, and mesons.

#### **Difference Between Leptons and Hadrons | Compare the ...**

Because all hadrons interact by the strong interaction, and yet they can decay into leptons (i.e. in Beta + or - decay) and I thought leptons only felt the weak interaction. So do hadrons "interact" by the strong interaction (and by "interaction", I'm guessing it means they feel the force), and they decay by the weak interaction.
