Simulation-based optimization (also known as simply simulation optimization) integrates optimization techniques into simulation modeling and analysis. Because of the complexity of the simulation, the objective function may become difficult and expensive to evaluate. Usually, the underlying simulation model is stochastic, so that that the objective function must be estimated using statistical estimation techniques (called output analysis in simulation methodology).

Simulation-based optimization - Wikipedia

You throw a bunch of data at an algorithm, it finds patterns in the data, and maps future trends. This is the backbone of data mining, machine learning, and AI. Other things being equal, the larger the data set, the greater the accuracy of the predictions. Therefore, big data is highly desired. Simulation, in contrast, is model-centric.
