Manual Electrical
Fire Alarm System

A fire alarm manual call point (also known as break glass point) is a device which is used to trigger the alarm circuit by breaking the glass and pressing a frangible element in case of emergency or fire. Call points are installed at 1.4 meter above the floor level for ease access in case of emergency.

Systems and Their
Wiring Diagrams

Manual fire alarm activation is typically achieved through the use of a pull station or

call point, which then sounds the evacuation alarm for the relevant building or zone. Manual fire alarm activation requires human intervention, as distinct from automatic fire alarm activation such as that provided through the use of heat detectors and smoke detectors. It is, however, possible for call points/pull stations to be used in conjunction with automatic detection as part of an overall fire detection
