Mathematical Modeling and Applied Calculus provides a modern outline of the ideas of Calculus and is aimed at those who do not intend to enter the traditional calculus sequence. Topics that are not traditionally taught in a one-semester Calculus course, such as dimensional analysis and the method of least squares, are woven together with the ideas of mathematical modeling and the ideas of calculus to provide a rich experience and a large toolbox of mathematical techniques for future studies.

The two standout features of Mathematical Modeling and Applied Calculus are its synthesized approach to mathematical modeling and calculus and its use of real-world data to motivate mathematical modeling in a manner that is interesting and relevant. Of course, the book covers the usual concepts: limits, derivatives, and integrals of (real) functions, the use of functions for mathematical modeling, and the use of calculus in the analysis of such models.

algebra course. But the modeling approach provides a context in which the algebraic methods become more meaningful and applicable. To illustrate these ideas, I will present below a progression of three topics from a modeling course I developed at American University in the mid 1990's. The course is called Elementary Mathematical Models (EMM).

Much of classical economics can be presented in simple geometric terms or elementary mathematical notation. Mathematical economics, however, conventionally makes use of calculus and matrix algebra in economic analysis in order to make powerful claims that would be more difficult without such mathematical tools. These tools are prerequisites for formal study, not only in

mathematical economics but in contemporary economic theory in general.

Multivariable calculus. This is the part where linear algebra and calculus come together, laying the foundations for the primary tool to train neural networks: gradient descent. Mathematically speaking, a neural network is simply a function of multiple variables. (Although, the number of variables can be in the millions.)
