...

A dialogue system, or conversational agent, is a computer system intended to converse with a human. Dialogue systems employed one or more of text, speech, graphics, haptics, gestures, and other modes for communication on both the input and output channel. The elements of a dialogue system are not defined, however they are different from chatbot. The typical GUI wizard engages in a sort of dialog, but it includes very few of the common dialogue system components, and dialog state is trivial.

(PDF) Semantically Conditioned LSTM-based Natural Language ...

Natural language generation (NLG) is a critical component of spoken dialogue and it has a significant impact both on usability and perceived quality. Most NLG systems in common use employ rules and heuristics and tend to generate rigid and stylised responses without the natural variation of human language. They are also not easily scaled to systems covering multiple domains and languages.
