A pneumatic motor, or compressed air engine, is a type of motor which does mechanical work by expanding compressed air. Pneumatic motors generally convert the compressed air energy to mechanical work through either linear or rotary motion. Linear motion can come from either a diaphragm or piston actuator, while rotary motion is supplied by either a vane type air motor, piston air motor, air turbine or gear type motor. Pneumatic motors have existed in many forms over the past two centuries, ranging

This Air Engine is just as powerful as a V-8 gasoline engine, but is far better and has a more powerful take off. Any engine or motor that runs on gasoline or propane can be converted to run on compressed air, and is very high efficient! The above US Patent drawing is much more simple than it looks. You do not have to add all the extras as shown.

The Air Engine - Fuelless Power

The principal advantages of an air powered engine is It uses no gasoline or other bio-carbon based fuel. Refueling may be done at home, but filling the tanks to full pressure would require compressors for 250-300 bars, which are not normally available for home standard utilization, considering the danger inherent at these pressure levels. As with gasoline, service stations would have to install the necessary air facilities if such cars became sufficiently popular to warrant it.
