Acceleration Problems

You end up with time squared in the denominator just because it's velocity divided by time — that's something you get used to when solving physics problems. In other words, acceleration is the rate at which your velocity or speed changes because rates have time in the denominator. So for acceleration, you can expect to see units of meters per second ², or centimeters per second ², or miles per second ², or feet per second ², or even kilometers per hour ².
