Choice Under Uncertainty Chapter 6

This chapter begins with a description of a model of individual choice under uncertainty, namely, the expected utility model of preferences for lotteries. A number of problems are examined from the perspective of linearity in the probabilities: the 'Allais' paradox or fanning out of indifference curves, the common-ratio effect for negative pay-offs, the effect of risk aversion, preference reversal, and framing effects (i.e., where systematic differences occur in choice due to alternative ...

Choice Under Uncertainty Chapter 6

Chapter 6 Choice Under Uncertainty Up until now, we have been concerned with choice under certainty. A consumer chooses which commodity bundle to consume. A producer chooses how much output to produce using which mix of inputs. In either case, there is no uncertainty about the outcome of the choice.

Chapter 6

6. (in memoriam) According to Paul Samuelson, the mathematician Stanislaw Ulam once defined a coward as someone who will not bet even when you offer him two-to-one odds and let him choose his side. (A gamble with two-to-one odds is one in which the individual wins $2x$ if an event A occurs and loses x if A does not occur. Letting the
