Osteoporosis - NHS

Medicines for osteoporosis. A number of different medicines are used to treat osteoporosis (and sometimes osteopenia). Bisphosphonates. Bisphosphonates slow the rate that bone is broken down in your body. This maintains bone density and reduces your risk of a broken bone. There are a number of different bisphosphonates, including: alendronic acid

Osteoporosis - Treatment - NHS

Osteoporosis causes bones to become weaker and more fragile. Some people are more at risk than others. Bones are thickest and strongest in your early adult life until your late 20s. You gradually start losing bone from around the age of 35. This happens to everyone, but some people develop osteoporosis and lose bone much faster than normal.
