We use simulation to design the product using things like topology optimization, or we integrate control systems at the earliest stages, and then when we get to validation, it's a simple check box instead of an iterative process. So, simulation-driven design is putting simulation at the front of the design process and using simulation technology to create a design instead of using simulation to analyze it later.”

Abstract. Model-based online optimization has not been widely applied to bioprocesses due to the challenges of modeling complex biological behaviors, low-quality industrial measurements, and lack of visualization techniques for ongoing processes. This study proposes an innovative hybrid modeling framework which takes advantages of both physics-based and data-driven modeling for bioprocess online monitoring, prediction, and optimization.
