real meaning of teaching mathematics interactively in primary schools. Each section is set clearly within a context, is linked by 'key ideas' – the important bits to think about – and is summarised to give a succinct close to the chapter's content and thinking. It is a book that the reader will definitely find useful and thought provoking. It certainly made me consider how small changes and a wider variety of approaches in the classroom can make big changes in children's learning and understanding of mathematical concepts' - Mike Eatwell, Primary Maths Advisor, Bristol LEA Using a whole-class, interactive approach to teaching mathematics is a key feature of the National Numeracy Strategy (NNS), and this book looks at not only what works but also why things work.

Teachers will be able to understand why and how the various teaching strategies they are using in their classrooms have a positive effect on children's learning. The book covers: " how to engage in meaningful reflective practice that will improve your lessons " how to use whiteboards " making mathematical meaning through talk " getting the whole class interacting " thinking, talking and acting mathematically " teaching number - starting points " teaching shape and space - starting points " developing your interactive teaching " a glossary of terms It is aimed at both practising and trainee teachers, and offers clear subject guidance as well as an explanation of a key part of the NNS. Unlocking Creativity in Solving Novel Mathematics Problems

Cognitive and Non-Cognitive Perspectives and Approaches *Routledge*

Unlocking Creativity in Solving Novel Mathematics Problems delivers a fascinating insight into thinking and feeling approaches used in creative problem solving and explores whether attending to 'feeling' makes any difference to solving novel problems successfully. With a focus on research

throughout, this book reveals ways of identifying, describing and measuring 'feeling' (or 'intuition') in problem-solving processes. It details construction of a new creative problem-solving conceptual framework using cognitive and non-cognitive elements, including the brain's visuo-spatial and linguistic circuits, conscious and non-conscious mental activity, and the generation of feeling in listening to the self, identified from verbal data. This framework becomes the process model for developing a comprehensive quantitative model of creative problem solving incorporating the Person, Product, Process and Environment dimensions of creativity. In a world constantly seeking new ideas and new approaches to solving complex

problems, the application of this book's findings will revolutionize the way students, teachers, businesses and industries approach novel problem solving, and mathematics learning and teaching.

Management Skills in Primary Schools *Routledge*

Originally published in 1988. The qualities that identify a good school are high teaching standards and teacher morale, good levels of behaviour, successful pupil performance and a well-balanced provision of extra-curricular activities. Such schools are described as 'well-run' but the correlation between effectiveness and an explicit management strategy is not yet established. This book seeks to examine the role of management in the primary school and to identify those areas in which effective management practice can make a valuable contribution to

school life for the benefit of both staff and pupils. It argues that although useful insights can be gained into school organisation from the scientific management perspective, the human relation approach to management has more to offer to those working in the primary sector. The focus is therefore on personal relationships. The importance of a clear sense of purpose is emphasised throughout, especially in view of the challenges which now face our primary schools.
