Difference Between Continental Drift and Plate Tectonics ...

The plate tectonics theory refers to the large-scale movement of the seven major plates along with several other smaller plates that form the earth's

lithosphere, for the last hundreds of millions of years. The theory is based on the concept proposed by the continental drift model and was accepted by the geological community in the early 1960s.

Continental Drift vs Plate Tectonics - Difference

Continental Drift and Plate-Tectonics Theory. According to the theory of continental drift, the world was made up of a single continent through most of geologic time. That continent eventually separated and drifted apart, forming into the seven continents we have today.

Continental Drift and Plate-Tectonics Theory

Looking at these 2 main factors, Wegener hypothesized his continental drift theory. He suggested that the continents are floating on the mantle – a layer of hot, molten rocks in the Earth. Due to the heat produced by this layer, currents are created, which cause the continents to drift.

Continental Drift Theory: How is it Different From Plate ...

Today, the theory of continental drift has been replaced by the science of plate tectonics. The theory of continental drift is most associated with the scientist Alfred Wegener . In the early 20th century, Wegener published a paper explaining his theory that the continental landmasses were “drifting” across the Earth, sometimes plowing through oceans and into each other.
