El límite de una función es un concepto fundamental del cálculo diferencial matemático. Informalmente, el hecho que una función f tiene un límite L en el punto p , significa que el valor de f puede ser tan cercano a L como se desee,

tomando puntos suficientemente cercanos a p , pero distintos de p . En análisis real para funciones de una variable, se puede hacer una definición de límite similar a la de límite de una sucesión, en la cual, los valores que toma la función dentro de un ...

CALCULO DIFERENCIAL : LIMITES

Recuérdese que la derivada de la función en el punto es la pendiente de la recta tangente a la función en el punto, como sabemos que la tangente de un ángulo es igual al cociente entre el cateto opuesto (incremento de y) y el cateto contiguo (incremento de x) de un hipotético triángulo rectángulo, sólo hay que despejar el incremento de y que equivale a nuestro diferencial.
