Dynamic Systems Biology Modeling and Simulation

Introduction. Many biologists and ecologists have developed models that find widespread use in theoretical investigations and in applications to organism behavior, disease control, population and metapopulation theory, ecosystem dynamics, and environmental management. This book captures and extends the process of model development by concentrating on the dynamic aspects of these processes and by providing tools that virtually anyone with basic knowledge in the Life

Dynamic Systems Biology Modeling And Simulation

Time-discrete dynamic systems models have long been used in biology. Biologic computer simulations require careful

consideration as to the level of detail necessary for a representative model, because unnecessary detail will lead to models so complex that detailed numerical study would become highly cumbersome or impossible.

Dynamic Systems Biology Modeling and Simulation by ...

In mathematics, a dynamical system is a system in which a function describes the time dependence of a point in a

geometrical space. Examples include the mathematical models that describe the swinging of a clock pendulum, the flow of water in a pipe, and the number of fish each springtime in a lake. At any given time, a dynamical system has a state given by a tuple of real numbers (a vector) that can be represented by a point in an appropriate state space (a geometrical manifold). The evolution r
