The author deals with the challenge of decision-making in education, an area that characterized by great complexity and dynamics as illustrated in recent studies. This article will present the cybernetic model, which specializes in explaining complex decision situations that require improvisation and complex decisions in education as an option for implementation.

How to Apply the Cybernetic Decision Making Model in ...

Wiener defined cybernetics as "the science of control and communications in the animal and machine." This definition relates cybernetics closely with the theory of automatic control and also with physiology, particularly the physiology of the nervous system. For instance, a "controller" might be the human brain, which might receive signals from a "monitor" (the eyes) regarding the distance between a reaching hand and an object to

be picked up.
