The chapter emphasizes on different microbial technologies like biofertilizers, bio-pesticides, PGPR, GMO's etc. that has great potential in solving major agricultural (crop productivity, plant health protection, and soil health maintenance) and environmental issues (bioremediation of soil and water from organic and inorganic pollutants).

Role of Microbial Technology in Agricultural ...

Microbial biotechnology, enabled by genome studies, will lead to breakthroughs such as improved vaccines and better disease-diagnostic

tools, improved microbial agents for biological control of plant and animal pests, modifications of plant and animal pathogens for reduced virulence, development of new industrial catalysts and fermentation organisms, and development of new microbial agents for bioremediation of soil and water contaminated by agricultural runoff.

Microbial Biotechnology | National Institute of Food and ...

Microbes include fungi, bacteria and viruses. Farmers and ranchers often think of microbes as pests that are destructive to their crops or animals (as well as themselves), but many microbes are beneficial. Soil microbes (bacteria and fungi) are essential for decomposing organic matter and recycling old plant material.

Beneficial Microbes for Agriculture

Thus, using microbes as bioinoculants is believed to be the best substitute of chemical fertilizers as eco-friendly manner for plant growth and soil fertility. These microbes are known to be the potent tool to provide substantial benefits to crops for sustainable agriculture.
