Some quadratic expressions can be factored as perfect squares. For example, $x^2+6x+9=(x+3)^2$. However, even if an expression isn't a perfect square, we can turn it into one by adding a constant number. For example, x^2+6x+5 isn't a perfect square, but if we add 4 we get $(x+3)^2$. This, in essence, is the method of *completing the square*
