New Caledonian crows (*Corvus moneduloides*) are prolific tool users in captivity and in the wild, and have an inherited predisposition to express tool-oriented behaviours. To further understand the evolution and development of tool use, we compared the development of object manipulation in New Caledonian crows and common ravens (*Corvus corax*), which do not routinely use tools.

One candidate for an evolutionary precursor for TOB in NC crows is food-caching, which is performed to some degree by nearly all corvid species, including NC crows (Hunt, 2000; Kenward et al., 2006), and the inferred common ancestor (de Kort & Clayton, 2006). 45 Structurally, caching and TOB both involve the insertion of objects into substrates.

The term can also be used to refer to the study of the entirety of an organism's lifespan. Ontogeny - Wikipedia

In science dictionaries you'll come across 'ontogeny' which means the origin of an organism or how it was developed.

'Phylogeny,' on the other hand, is the evolution of an organism or how it evolved. Ontogeny and phylogeny are discussed in life science subjects such as biology, microbiology, developmental biology, and psychology just to name a few.

Difference Between Ontogeny and Phylogeny

These scientists claimed that ontogeny recapitulates phylogeny (ORP). This phrase suggests that an organism's development will take it through each of the adult stages of its evolutionary history, or its phylogeny. At the time, some scientists thought that evolution worked by adding new stages on to the end of an organism's development.

Since the inception of the notion of human development in the 18th century, researchers have wrestled with the relationship between processes of evolution and processes of ontogenesis. Earlier attempts, such as the classical "ontogenesis as recapitulation of evolution" hypothesis, were typically one-sided in emphasis.
