The process is simple. Find a shallow flowing spot on a creek. Fill the pan three-quarters with gravel then shake from side to side, then around in circles to wash out the lighter material. The gold will settle at the bottom of the pan in the form of “black sand”. A magnet can help to separate the black magnetic iron sand from the gold.

Gold panning for fun and profit on Vancouver Island ...

As production costs began to exceed profits from sales, a decrease in global gold production emerged in the period 2001 to 2008, which subsequently resulted in higher demand and an increasing gold price. For mining industries this was an incentive to start boosting gold production again after 2008. An important factor is that gold is regarded as a safe haven against falling currencies and stocks on the volatile financial markets since 2008.
