A ruled surface interpolates to two

boundary curves—a rectangular surface, however, has four boundary curves and that is precisely to what a Coons patch interpolates. The difference from earlier occurrences of linear interpolation is that at present one interpolate to whole curves, not just discrete points; thus, this process is often referred to as transfinite interpolation.

Non-uniform rational basis spline (NURBS) is a mathematical model commonly used in computer graphics for generating and representing curves and surfaces. It offers great flexibility and precision for handling both analytic shapes (surfaces defined by common mathematical

formulae) and modeled shapes. NURBS are commonly used in computer-aided design (CAD), manufacturing (CAM), and engineering (CAE) and are part of numerous industry wide standards, such as IGES, STEP, ACIS, and PHIGS.
