Physical And Chemical Equilibrium For

Based on the characteristics of equilibrium, there are two types; physical equilibrium and chemical equilibrium. The key difference between physical and chemical equilibrium is that a physical equilibrium is an equilibrium in which the physical state of the system does not change whereas chemical equilibrium is the equilibrium state in which the concentrations of reactants and products is not changed with time.

Difference Between Physical and Chemical Equilibrium ...

There are two types of equilibria. a) Physical equilibrium and b) Chemical equilibrium. The equilibrium attained in physical processes is called physical equilibrium. e.g. Equilibrium achieved in physical processes like the dissolution of salt or evaporation of water etc. The equilibrium attained in chemical processes is called chemical equilibrium. e.g. Equilibrium achieved in chemical processes like decomposition of calcium carbonate, the reaction between hydrogen and iodine etc.

Chemical Equilibrium in Chemical Reactions

In a chemical reaction, chemical equilibrium is the state in which both reactants and products are present in concentrations which have no further tendency to change with time, so that there is no observable change in the properties of the system. This state results when the forward reaction proceeds at the same rate as the reverse reaction. The reaction rates of the forward and backward reactions are generally not zero, but equal. Thus, there are no net changes in the concentrations of the reac
