The 100 Greatest Lies in Physics *Createspace Independent Publishing Platform*

The 100 Greatest Lies in physics is a follow-up to Ray Fleming's The Zero-Point Universe as he continues to explore the importance of zero-point energy to modern physics. Since before the start of this century, evidence has mounted that space is not empty. Space is filled with quantum vacuum fluctuations called zero-point energy, and this energy is a modern form of aether. Most of the physics of the past century, which led to today's standard model, fails to account for this modern aether. In relativity theory there are two types of relativity, one that includes aether and one that rejects it. Physicists choose poorly

and wrongly champion the theory that rejects the modern aether. Even though many theories like this are now known to be invalid, physicists still cling to the physics of the past. The mainstream physics of the last century is a complete disaster due to physicists' failure to incorporate zero-point energy into their explanations of forces and every day phenomena. The 100 Greatest Lies in Physics catalogs many of the most outrageous mistakes in physics in hopes that physicists will do their jobs and stop lying to everyone.
