Metric Rigidity Theorems On Hermitian Locally Symmetric ...

In this article we study metric rigidity theorems on locally symmetric Hermitian manifolds of rank ≥ 2 and of negative Ricci curvature. Our principal result is:

For the Hermitian holomorphic line bundle (L, h) over $P(V)$ we use the holomorphic fiber coordinate $A =$ in a neighborhood of W to assert PROPOSITION 1 In terms of the coordinates given above A is a special holomorphic fiber coordinates for L adapted to h at $[p]$ and, denoting the curvature form of (V, h) by e , we have $= -41 du U A diia + dz' A$ As a consequence (L, h) is of seminegative curvature if and only if (V, h) is of seminegative curvature.

This monograph studies the problem of characterizing canonical metrics on Hermitian locally symmetric manifolds X of non-compact/compact types in terms of

curvature conditions. The proofs of these metric rigidity theorems are applied to the study of holomorphic mappings between manifolds X of the same type. Moreover, a dual version of the generalized Frankel Conjecture on characterizing ...
