The Principles Of Pollination Ecology

In angiosperms, pollination typically develops in three phases: (1) release of pollen from the male part of a flower, (2) transfer from the paternal to the maternal part, and (3) successful placing of pollen on the recipient surface of the latter, followed by germination of the pollen grain.

Journal of Pollination Ecology

Pollination ecology. At least three quarters of the flowering crop and wild plant species are fully or partly dependent on insect pollination for reproduction and a third of our global food production comes from insect pollinated crops. Honey bees are used to pollinate crops, but recent findings indicate that wild pollinators, such as bumble bees, solitary bees and hoverflies, are much more important than previously thought.

Pollination ecology | Department of Biology

This is the third (revised) edition of a work first published in 1966. The aim of the authors is to formulate general principles of pollination ecology that are universally applicable and will enable the reader to continue his own observations in the geographical area in which he is working.
