Chapter 6 Categorical data So far, we've focused on analyzing numerical data. This section focuses on data that's categorical (e.g., with values like 'red' or 'blue' that don't have any ordering). We'll start with the case where both the inputs and the outputs are categorical, then discuss categorical inputs with numerical outputs.

multinomial distribution generalization) plays the role that the normal distribution does for continuous response. Binomial Distribution • n Bernoulli trials - two possible outcomes for each (success, failure) • $\pi = P(\text{success})$, $1 - \pi = P(\text{failure})$ for each trial

Categorical Data Analysis Lecture September 10, 2012

This book offers a relatively self-
contained presentation of the
fundamental results in categorical data

analysis, which plays a central role
among the statistical techniques applied
in the social, political and behavioral
sciences, as well as in marketing and
medical and biological research. The
methods applied are mainly aimed at
understanding the structure of
associations among variables and the
effects of other variables on these
interactions.

STAT 8620, Categorical Data Analysis & Generalized Linear Models — Lecture Notes. The goal of this course is to teach

methods for the analysis of discrete response data and to develop a general framework for the analysis of discrete data and other data types for which the assumptions of the classical linear model (CLM) do not hold. Such a framework is provided by a class of models known as generalized linear models or GLMs.

STAT 8620, Categorical Data Analysis & Generalized Linear ...

The basics of categorical data analysis are covered in Chapters 1–8. Chapter 2 surveys standard descriptive and inferential methods for contingency tables, such as odds ratios, tests of independence, and conditional vs marginal associations.

Introduction to Categorical Data

Analysis

counts are categorical data. A categorical variable is measured on a scale that is nominal (eg – religion) or ordinal (eg – diagnosis coded as “benign”, “suspicious”, or “malignant”). Unit 4 (Categorical Data Analysis) is an introduction to some basic methods for the analysis of categorical data: (1) association in a 2x2 table; (2) variation of a 2x2 table
