Chapter 10 Moderation Mediation And More Regression

Moderation is a way to check whether that third variable influences the strength or direction of the relationship between an independent and dependent variable. An easy way to remember this is that the moderator variable might change the strength of a relationship from strong to moderate, to nothing at all. It is almost like a turn dial on the relationship; as you change values of the moderator, a statistical relationship that you observed before might dissolve away.

What is the difference between moderation and mediation ...

1 What are Mediation and Moderation? Mediation analysis tests a hypothetical causal chain where one variable X affects a second variable M and, in turn, that variable affects a third variable Y.

Mediators describe the how or why of a (typically well-established) relationship between two other variables and are sometimes called intermediary variables since they often describe the process through which an effect occurs.
