Harmful Algal Blooms ... and Coral Reefs? Harmful algal blooms can cause numerous problems in the environment. The US EPA describes algae blooms as overgrowths of algae in the water, which can be caused when nutrient pollution (nitrogen and phosphorus) in the water fuels algal growth. Harmful algal blooms can be harmful to aquatic life, as some produce toxins that can make animals sick, while others can die off in large

quantities and deplete oxygen in the water when they decompose.

Are Harmful Algal Blooms a New Concern For Coral Reefs ...

Algal Blooms can have serious effects on corals. Red algae, brown algae, and green algae are a few examples of macro-algae that can have a very negative effect on corals. They do this by outcompeting, overgrowing and eventually replacing sea-grasses and coral reef habitats. According to some research that is being done, harmful tropical algal blooms are increasing in frequency and intensity.

Is brown algae harmful? It can be harmful to plants or corals because it can coat them and block sunlight and nutrients to them. If the algae starts to die it can cause pollution problems. However, many algae eating fish will relish brown algae and is generally not harmful if it doesn't overly cover plants or corals.

Brown algae - The fish doctor

Let's start with one of the most feared type of algae: 1. Green Aquarium Water Algae. This common freshwater aquarium algae turns your water opaque green, and it can sometimes overtake the tank to the extent that it reduces the transparency of water. It looks terrible, for sure, but luckily, it's not toxic to your fish.

Most Common Algae Types, Causes & How to Remove from Aquarium

Brown algae and green hair algae are the most common types of algae in most tanks, and these are very beneficial for additional filtration of nitrites and harmful toxins. What kind of Algae is harmful to the fish tank? If other algae are present, like staghorn algae, it could

be an indicator that something is not right with your fish tank.
