The Electromagnetic Spectrum The electromagnetic (EM) spectrum is the range of all types of EM radiation . Radiation is energy that travels and spreads out as it goes – the visible light that comes from a lamp in your house and the radio waves that come from a radio station are two types of electromagnetic radiation.

Electromagnetic Spectrum - Introduction
Electromagnetic Spectrum. The light that we see from stars is just one form of observing we can do. 'Invisible' Astronomy or Non-optical astronomy tells us a lot about space. Visible light is a form of radiation travelling at a wavelength millions of a millimetre wide. The light travels as a wave and the wavelength determines the colour seen.

Electromagnetic Spectrum | Telescopes | Space FM

The electromagnetic spectrum comprises the span of all electromagnetic radiation and consists of many subranges, commonly referred to as portions, such as visible light or ultraviolet radiation. The various portions bear different names based on differences in behaviour in the emission, transmission, and absorption of the corresponding waves and also based on their different practical

applications.

No we can not hear radio waves,and a Radio works by transmitting and receiving electromagnetic waves. The radio signal is an electronic current moving back and forth very quickly. A transmitter radiates this field outward via an antenna; a receiver then picks up the field and translates it to the sounds heard through the radio.
