Spatial auto-correlation can be an indicator of the presence of an SSP, but the dynamic changes over time between spatial locations may not result in values being similar or inversely correlated in a simple way. In many of these domains, the dynamics are often modeled by hand using agent-based models and geostatistics methods.

Learning Dynamic Spatial Relations : the Case of a ...

The spatial relationships between parts can be modeled by a series of matrix multiplications, between the output of child capsules and parents, that capture the pose (the position and orientation) of each part; then a capsule network essentially checks for agreement between these poses. Agreement is

based on the vector orientations of child and parent capsules, and when compared to the scalar outputs of a typical convolutional layer, a capsule's vector output can provide more information.

Capsule Networks - Machine and deep learning educator.

The optimal spatial relation between instruments and endoscope is not a static one. It changes with the surgical task and the anatomical structures that are manipulated (Fig. 5.2). Even the optimal distance of endoscope to instruments varies widely, in relation to the optimal visual zoom of the operating site.
