CONSTRUCTED WETLANDS TO TREAT WASTEWATER

Constructed Wetlands. Constructed wetlands or treatment wetlands are artificial wetlands that are used for treating organic, inorganic and excess nutrient contaminants in surface water, municipal wastewater, domestic sewage, refinery effluents, acid uranium mine drainage or landfill leachate. A considerable amount of research and applied work has been conducted using constructed wetlands for some of these applications.

Overview About the author. The expanding use of decentralized wastewater management has resulted in an increased interest in small-scale wetland treatment systems. However, there is limited information available on the use, distribution of and performance of these small-scale systems. The purpose of this study was to address this knowledge gap by developing criteria for the feasibility, design, operation, and maintenance of small-scale wetland treatment systems.
