The Natural Way of Things *Penguin*

"A Handmaid's Tale for the 21st century" (Prism Magazine), Wood's dystopian tale about a group of young women held prisoner in the Australian desert is a prescient feminist fable for our times. As the Guardian writes, "contemporary

feminism may have found its masterpiece of horror." Drugged, dressed in old-fashioned rags, and fiending for a cigarette, Yolanda wakes up in a barren room. Verla, a young woman who seems vaguely familiar, sits nearby. Down a hallway echoing loudly with the voices of mysterious men, in a stark compound deep in the Australian outback, other captive women are just coming to. Starved, sedated, the girls can't be sure of anything—except the painful episodes in their pasts that link them. Drawing strength from the animal instincts they're forced to rely on, the women go from hunted to hunters, along the way becoming unforgettable and

boldly original literary heroines that readers will both relate to and root for. The Natural Way of Things is a lucid and illusory fable and a brilliantly plotted novel of ideas that reminds us of mankind's own vast contradictions—the capacity for savagery, selfishness, resilience, and redemption all contained by a single, vulnerable body. The Creative Eye

Drawing, Vision and the Brain

The Creative Eye - vision, drawing and the brain is a textbook for the next generation of visual artists about *How To Draw* - the very act of drawing and the act of human sight. This book takes the teaching tradition of the previous 80 years and hauls it into the 21st century. It provides a masterclass of research and practical examples for students, instructors, professional artists, life drawing classes, and any reader curious about creativity. The

Creative Eye closely examines the act of drawing, the act of human vision, including depth vision, not just "seeing flat" as is taught by recent how-to-draw manuals. How do the eyes really see? The Creative Eye accesses new research explaining what goes on in the hard-working visual brain - even what hinders us as we try to draw. Spears' method, developed over nearly half a century of international teaching, obsessive drawing and more than 20 books published, began as studio experiments and emerged as unique exercises in drawing. The book uses hundreds of illustrations of her own and student work, research on visual

perception, and quotes and anecdotes of artists and poets. Heather persuades, informs and stimulates both the student and professional artist, injecting the fun and enthusiasm of the classroom into this new and amazing work. The Creative Eye stands highly praised, a modern classic in the theory and practice of drawing.

A Natural History of the Future

What the Laws of Biology Tell Us About the Destiny of the Human Species

Hachette UK

Over the past century, our species has made unprecedented technological innovations with which we have sought to control nature. From river levees to enormous one-crop fields, we continue to try to reshape nature for our purposes - so much so it seems we may be in danger of destroying it. In *A Natural History of the Future*, biologist Rob Dunn argues that

nothing could be further from the truth: rather than asking whether nature will survive us, better to ask whether we will survive nature. Despite our best - or worst - efforts to control the biological world, life has its own rules, and no amount of human tampering can rewrite them. Elucidating several fundamental laws of ecology, evolution, and biogeography, Dunn shows why life cannot be stopped. We sequester our crops on monocultured fields, only to find new life emerging to attack them. We dump toxic waste only to find microbes to colonize it. And even in the London Tube, we have seen a new species of mosquito emerge to take advantage of an

apparently inhospitable habitat. Life will not be repressed by our best-laid plans. Instead, Dunn shows us a vision of the biological future and the challenges the next generations could face. *A Natural History of the Future* sets a new standard for understanding the diversity of life and our future as a species.
