Solids transport is done in many different ways: screw conveyors; bucket elevators; belt conveyors; and pneumatic conveyors. It is important to properly designate the routing of solids transport and provide safety interlocks so that the wrong product does not wind up in the wrong storage system or hopper car. As with many chemical engineering unit operations, there are overlapping choices in solids size reduction equipment.

Abstract. Solid transport and handling is a crucial part of any process that involves solids. This topic sometimes is forgotten until the very end of the process design and retrofits are needed and decisions are made which will not be optimum for the overall process. There are many types of techniques that can be employed for the transport and handling of solids and the basic decision is one that depends intimately on the process and materials being processed.
