Lab Report Example For Buffer

For example, mixing 110 mL of 0.500 M acetic acid and 90.0 mL of 0.500 M sodium acetate produces a buffer with 0.275 M acetic acid and 0.225 M acetate, giving $c/b/c a = 0.82$. If only one of the conjugate acid-base pair is available, then addition of strong acid or strong base creates a buffer. For example, the addition of 100.0 mL of 0.500 M

Experiment 6: Buffers

Buffers are essential in many biological mechanisms which often require very narrow, controlled pH ranges in order to be carried out. For example, the pH range of human blood must remain between 7.4-7.8 2 or else the ability of hemoglobin to bind to oxygen is compromised, and a condition known as acidosis (or alkalosis) sets in 2.

For example, acetic acid and sodium acetate will be combined in solution. In Part B, you will prepare acetate buffers by the indirect method and measure the pH of each solution. In the indirect method, strong base is added to the weak acid OR strong acid is added to the conjugate weak base. For example, acetic acid will be mixed with sodium hydroxide solution.

A buffer is the combination of a weak acid and a salt of the weak acid. Acetic acid and sodium acetate are an example of this kind of buffer pair. Buffers resist changes in pH upon the addition of small amounts of H^+ or OH^- ions. The dissociation equation for acetic acid contains both of the buffer components, $HC_2H_3O_2$ and $C_2H_3O_2^-$:

Buffer Lab. Buffers are an important component in any biological system. Since the reactions in cells only work in a narrow range of pH, buffers exist to help keep pH within that range. In this investigation you will demonstrate that buffers stabilize the pH of a liquid and measure the ability of commercial antacids to buffer the pH of a liquid.

The buffering capacity of a solution is tested by adding small amounts of acid (for example, HCl) and base (for example, NaOH) and checking the pH after each addition. If the pH changes only slightly, the solution is a good buffer. Eventually its buffering capacity will be exhausted, however, and the pH will change dramatically.
