Question Answering System Architecture

Question Answering System Architecture Question answering systems have been extended in recent years to encompass additional domains of knowledge For example, systems have been developed to automatically answer temporal and geospatial questions, questions of definition and terminology, biographical questions, multilingual questions, and questions about the content of audio, images, and video.

Question Answering System Architecture

Question answering is very dependent on a good search corpus—for without documents containing the answer, there is little any question answering system can do. It thus makes sense that larger collection sizes generally lend well to better question answering performance, unless the question domain is orthogonal to the collection.

Question answering - Wikipedia

Automatic question-answering systems can provide humans with efficient access to vast amounts of information, and the task also acts as an important proxy for assessing machine literacy via reading comprehension.

Think of a system design interview as a brainstorming session, driven by open-ended questions, in which you'll be expected to competently discuss a complex system. Consider it an opportunity to work with your interviewer, just as two team members would, to solve a real problem related to the company's goals.
