The current paper presents a model of the experience of anxiety in social/evaluative situations in people with social phobia. The model describes the manner in which people with social phobia perceive and process information related to potential evaluation and the way in which these processes differ between people high and low in social anxiety. It is argued that distortions and biases in the processing of social/evaluative information lead to heightened anxiety in social situations and, in ...

A cognitive-behavioral model of anxiety in social phobia ...
DSM-5 Criteria for a Specific Phobia Diagnosis A fear and a phobia are not the same, so it's important to know the difference. Your therapist cannot use a lab test to make a diagnosis so she and other mental health professionals consult the DSM-V (Diagnostic and Statistical Manual, 5th Ed., 2013).

DSM-5 Diagnostic Criteria for a Specific Phobia
Social anxiety disorder (formerly social phobia) is characterized by persistent fear of one or more social or performance situations in which the person is exposed to unfamiliar people or to possible scrutiny by others. The individual fears that he or she will act in a way (or show anxiety symptoms) that will be embarrassing and humiliating.
