Key facts. Dental caries (also known as tooth decay or dental cavities) is the most common noncommunicable disease

worldwide. Severe dental caries affects general health and often causes pain and infection, which may result in tooth extraction. Dental caries is an expensive disease to treat, consuming 5–10% of healthcare budgets in industrialized countries, and is among the main reasons for hospitalization of children in some high-income countries.

Sugars and dental caries

Tooth decay, also known as dental caries or cavities, is a breakdown of teeth due to acids made by bacteria. The cavities may be a number of different colors from yellow to black. Symptoms may include pain and difficulty with eating.

Tooth decay - Wikipedia

Dental caries (tooth decay) Dental caries result when plaque forms on the surface of a tooth and converts the free sugars (all sugars added to foods by the manufacturer, cook, or consumer, plus sugars naturally present in honey, syrups, and fruit juices) contained in foods and drinks into acids that destroy the tooth over time.

Oral health

Caries, also called tooth decay, cavity or decay of a tooth, a localized disease that begins at the surface of the tooth and may progress through the dentine into the pulp cavity. It is believed that the action of microorganisms in the mouth on ingested sugars and carbohydrates produces acids that eat away the enamel.

Caries | dental disease | Britannica

Dental caries are an infectious bacterial disease that results in localized demineralization and destruction of the teeth. Caries are the second most common cause of tooth loss, after periodontal disease. The infectious nature of dental caries is well-established.
