Package Sqldf R
 sqldf is an R package for running SQL statements on R data frames, optimized for

convenience. The user simply specifies an SQL statement in R using data frame names in place of table names and a database with appropriate table layouts/schema is automatically created, the data frames are automatically loaded into the database, the specified SQL statement is performed, the result is read back into R and the database is deleted all automatically behind the scenes making the database's existence ...

sqldf package | R Documentation

CRAN - Package sqldf. The sqldf() function is typically passed a single argument which is an SQL select statement where the table names are ordinary R data frame

names. sqldf() transparently sets up a database, imports the data frames into that database, performs the SQL select or other statement and returns the result using a heuristic to determine which class to assign to each column of the returned data frame.

CRAN - Package sqldf

sqldf () from the package sqldf allows the use of SQLite queries to select and manipulate data in R. SQL queries are entered as character strings. To select the first 10 rows of the "diamonds" dataset from the package ggplot2, for example: data ("diamonds") head (diamonds) # A tibble: 6 x 10 carat cut color clarity depth table price x y z <dbl>

R Language - sqldf | r Tutorial

Manipulating data frames in R Programming using SQL can be easily done using the sqldf package. This package in R provides a mechanism that allows data frame manipulation with SQL and also helps to connect with a limited number of databases. The sqldf package in R is basically used for executing the SQL commands or statements on data frames.

Manipulate R Data Frames Using SQL - GeeksforGeeks

A package, aka library, is a collection of functions someone has written to perform certain analysis / manipulation / etc. It's like the Excel Add-Ins, such as Analysis Data Pack, which lets you do regression and a few other statistical analyses.

Using SQL in R - R for Excel Users

This package contains functions that enable using SQL commands to filter CSV files, returning the results as a data frame. Although much of this type of selection can be accomplished using R native commands, it may be easier for some programmers to conceptualize this as SQL commands.
