#### **Master Slave Control Of Interline Power Flow Controller**

Master/slave is a model of communication for hardware devices where one device has a unidirectional control over one or more devices. This is often used in the electronic hardware space where one device acts as the controller, whereas the other devices are the ones being controlled. In short, one is the master and the others are slaves to be controlled by the master.

#### **What is Master/Slave? - Definition from Techopedia**

Master/slave is a model of asymmetric communication or control where one device or process (the "master") controls one or more other devices or processes (the "slaves") and serves as their communication hub. In some systems a master is selected from a group of eligible devices, with the other devices acting in the role of slaves. Historically, the master/slave terminology has existed for ...

#### **Master/slave (technology) - Wikipedia**

master: A master, in a technological context, is a device that controls one or more other devices. In networking, for example, a master/slave configuration is a communications model in which one device or process (known as the master) controls one or more other devices or processes (known as slaves).

The slave trade from Africa provided them with one opportunity. As a manager of several large Jamaican sugar estates remarked in 1804, it was a general policy to 'have the Negroes on an estate a mixture of nations so as to balance one set against another, to be sure of having two-thirds join the whites' (in the event of an uprising).

#### **How slaveholders in the Caribbean maintained control ...**

Cascade Temperature Control System. Cascade control systems (also called two-element control systems) have two control "loops" functioning: a master and a slave (also known as primary and secondary, respectively). Identify the master (primary) and slave (secondary) loops in this temperature control system, and also determine which loop should be tuned first (and why!).
