Airbus-A320 Engine General Description - YouTube

The IAE V2500 is a two-shaft high-bypass turbofan engine which powers the Airbus A320 family, the McDonnell Douglas MD-90, and the Embraer KC-390. The engine's name is a combination of the Roman numeral V, symbolizing the five original members of the International Aero Engines consortium, which was

formed in 1983 to produce the V2500 engine. The 2500 represents the 25,000 lbf (111 kN) produced by the original engine model, the V2500-A1 variant.

switches for the A320 family. A differential pressure switch is mounted on the V2500 engine to detect filter clogging in the fuel, LOP and scavenge oil systems. When the pressure differential between the high and low ports exceeds a pre-set value, the pressure sensor actuates a snap-action electrical switch to signal the filter condition.
