Algorithms and Protocols - Networking Tutorial

Various wireless security protocols were developed to protect home wireless networks. These wireless security protocols include WEP, WPA, and WPA2, each with their own strengths — and weaknesses. In addition to preventing uninvited guests from connecting to your wireless network, wireless security protocols encrypt your

private data as it is being transmitted over the airwaves. [...]

Some wireless APs do not support WPA2, however. In that case, the next best option is WPA, which the Wi-Fi Alliance released in 2003 as a stopgap until WPA2 was ready for prime time the following year.. At this point, no one should use the original wireless security protocol, WEP, as it is outdated and makes wireless networks

extremely vulnerable to outside threats.

This paper surveys the routing protocols for Ad Hoc mobile wireless networks. Topics discussed here are the various Table Driven Routing Protocols like Dynamic Destination-Sequenced Distance Vector Routing, Fisheye State Routing, Global State Routing, Zone-based Hierarchical Link State Routing, Clusterhead Gateway Switch Routing Protocols.
