Prepare a 0.2% solution. (This is not very much—it's about 1/8 of a teaspoon of baking soda in 300 ml of water.) Too much bicarbonate will cause small bubbles (CO₂) to form on the surface of the leaf which will make it difficult to sink the leaf disk. Add 1 drop of dilute liquid soap to this solution.

Leaves contain several types of pigments from which they get their color. Chlorophyll is the most common type of pigment found in leaves. This is what gives leaves their green color. Chlorophyll is also essential for photosynthesis, the process that plants use to create the food and energy they need to survive.
