Geometric Transformations . When talking about geometric transformations, we have to be very careful about the object being transformed. We have two alternatives, either the geometric objects are transformed or the coordinate system is transformed. These two are very closely related; but, the formulae that carry out the job are different.

Geometric Transformations

In mathematics, a geometric transformation is any bijection of a set to itself (or to another such set) with some salient geometrical underpinning. More specifically, it is a function whose domain and range are sets of points — most often both or both — such that the function is injective so that its inverse exists. The study of geometry may be approached via the study of these ...

1965, Michael B. P. Slater (translator), P. S. Modenov, A. S. Parkhomenko, Geometric Transformations, Volume 1: Euclidean and Affine Transformations, Academic Press, page 145 , Just as for plane transformations, we may show that the set of all affine transformations of space form a group. Under an affine transformation of space, the image of a line is a line, and the image of a plane is a plane.
