a discontinuous Lyapunov function designed by looking at the system structure has been proposed for a point mass subject to Coulomb friction in feedback with a PID controller. The analysis proposed here originates from the preliminary arguments presented in Iervolino et al. (2017b) where more restrictive classes of PWA systems and PWQ Lyapunov functions were considered. On the basis of this model, sufficient conditions for the exponential stability and -gain analysis are developed in the form of LMIs by using a discontinuous Lyapunov-Krasovskii functional approach. Moreover, the corresponding results can be further extended to more general cases, where the system matrices of the considered plant contain parameter uncertainties, represented in either polytopic or norm-bounded frameworks.
