Once your body's heart rate goes down during breath-holding, it tries to compensate by raising your blood pressure to get blood pumped to the body. This happens as our blood vessels constrict. This...

What Happens to When You Hold Your Breath | Reader's Digest

When you hold your breath you build up CO₂ and deplete O₂ in your blood stream. The longer you hold your breath you become 'hypoxic' which is a state of very low O₂ levels in your blood. If it continues for too long the lack of O₂ will have serious consequences as we need O₂ for life to exist.

What Happens When You Hold Your Breath For A Few Minutes A ...

Expiratory muscle activity was more prominent in some subjects than others, and increased through each breath hold. Increasing lung volume caused a delay in onset and a decrease in frequency of contractions with no consistent change in duty cycle and a decline in magnitude of esophageal pressure swings that could be accounted for by force-length and geometric properties.

Effect of lung volume on breath holding - PubMed

Conceivably, effects of breath-holding position on the ECG could be marked because, during breathing, a variety of factors may cause ECG changes. These include changes in electrical conductance properties of the thorax, changes in anatomical orientation of the heart, displacement of the precordial electrodes relative to the heart, and the Valsava effect.

Effects of breath-holding position on the QRS amplitudes ...

Factors that Affect Breath-Holding
During breath-holding, the oxygen partial pressure decreases, whereas that of carbon dioxide increases. There are sensors in the body that detect blood concentrations of oxygen and carbon dioxide; these include carotid and aortic

bodies for oxygen and sensors placed on the medulla for carbon dioxide detection.

Effects of Barometric Pressure on the Pulmonary System ...

When you breathe in oxygen and then hold your breath, you stimulate the parasympathetic nervous system even more, causing the heart rate to decrease. This process is known as bradycardia, notes Cheng. When you continue to hold your breath, organs expand with air and negative suction causes pressure on the thorax.

How Does Holding Your Breath Affect Heart Rate?

The mean breath holding time decreased from 25.8 seconds after the lowest grade of work to 5.8 seconds after the highest. It was proposed that the stimulus to breathe at the end of the hold was the same after all grades of work.
