The gearbox is the second stage in the transmission system, after the clutch. It is usually bolted to the rear of the engine, with the clutch between them. Modern cars with manual transmissions have four or five forward speeds and one reverse, as well as a neutral position.

How manual gearboxes work | How a Car Works

A manual transmission (also known as a manual gearbox; abbreviated as MT) is a multi-speed transmission where gear changes require the driver to select the gears by manually operating a gear stick and clutch (which is usually a foot pedal for cars, or a hand lever for motorcycles).. Early automobiles used sliding mesh manual transmissions with up to three forward gear ratios.

Manual transmission - Wikipedia

The input shaft is what comes from the engine, into the gearbox, via the clutch and flywheel. It is the raw source of rotational power as generated by the crankshaft within the engine. This feeds into the gearbox and drives the gears that will ultimately drive the wheels, but that power has to make a few more stops first.
