Fire in the Canyon

Religion, Migration, and the Mexican Dream *NYU Press*
The canyon in central Mexico was ablaze with torches as hundreds of people filed in. So palpable was their shared shock and grief, they later said, that neither pastor nor priest was needed. The event was a memorial service for one of their own who had died during an attempted border passage. Months later a survivor emerged from a coma to tell his story. The accident had provoked a near-death encounter with God that prompted his conversion to Pentecostalism. Today, over half of the local

residents of El Alberto, a town in central Mexico, are Pentecostal. Submitting themselves to the authority of a God for whom there are no borders, these Pentecostals today both embrace migration as their right while also praying that their "Mexican Dream"—the dream of a Mexican future with ample employment for all—will one day become a reality. Fire in the Canyon provides one of the first in-depth looks at the dynamic relationship between religion, migration, and ethnicity across the U.S.-Mexican border. Faced with the choice between life-threatening danger at the border and life-sapping poverty in Mexico, residents of El Alberto are drawing on both their religion and their indigenous heritage to demand not only the right to migrate, but also the right to stay home. If we wish to understand people's migration decisions, Sarat argues, we must take religion seriously. It is through religion that people formulate their ideas about life, death, and the limits of government authority. *Instructor's Guide*

Fire Weather and Fire Behavior at the 1968 Canyon Fire

Fire Behavior Associated with the 1994 South Canyon Fire on Storm King Mountain, Colorado

In the aftermath of the deaths of 14 firefighters during the South Canyon Fire in July 1994, fire scientists assessed what occurred and suggested guidelines that may help firefighters avert such a tragedy in the future. This report describes the fuel, weather, and topographical factors that caused the transition from a relatively slow-spreading, low-intensity surface fire to a high-intensity, fast-spreading fire burning through the entire fuel complex, surface to crown. The analysis includes a detailed chronology of fire and firefighter movements, changes in the environmental factors

affecting the fire behavior, and crew travel rates and fire spread rates. Eight discussion points apply directly to firefighter safety.

Young Men and Fire

Twenty-fifth Anniversary Edition *University of Chicago Press*
A devastating and lyrical work of nonfiction, *Young Men and Fire* describes the events of August 5, 1949, when a crew of fifteen of the US Forest Service’s elite airborne firefighters, the Smokejumpers, stepped into the sky above a remote forest fire in the Montana wilderness. Two hours after their jump, all but three of the men were dead or mortally burned. Haunted by these deaths for forty years, Norman Maclean puts together the scattered pieces of the Mann Gulch tragedy in *Young Men and Fire*, which won the National Book Critics Circle Award. Alongside Maclean’s now-canonical *A River Runs through It and Other Stories*, *Young Men and Fire* is recognized today as a classic of the American West. This twenty-fifth anniversary edition of Maclean’s later triumph—the last book he would write—includes a powerful new foreword by Timothy Egan, author of *The Big Burn* and *The Worst Hard Time*. As moving and profound as when it was first published, *Young Men and Fire* honors the literary legacy of a man who gave voice to an essential corner of the American soul.

Fourmile Canyon Fire Findings *CreateSpace*

The Fourmile Canyon Fire burned in the fall of 2010 in the Rocky Mountain Front Range adjacent to Boulder, Colorado. The fire occurred in steep, rugged terrain, primarily on privately owned mixed ponderosa pine and Douglas-fir forests. The fire started on September 6 when the humidity of the air was very dry and the winds were steadily blowing in the range of 15 miles per hour and gusting to over 40 miles per hour. These conditions prevailed for most of the first day when the fire burned approximately 5,700 acres and destroyed 162 homes. Because of the windy conditions, aircraft could not be used until late that first day. The first responders concentrated on evacuating the occupants of the 474 homes in the fire vicinity. No public or firefighters were injured during the course of the fire. This outcome was directly related to the excellent preparedness of Boulder County and, in particular, the Sheriff's Department and the local fire districts. Fuel treatments had previously been applied to several areas within the fire perimeter to modify fire behavior and/or burn severity if a wildfire was to occur. However, the fuel treatments had minimal impact in affecting how the fire burned or the damage it caused. After the initial day of intense burning and 4 additional days of relatively benign fire behavior, the Fourmile Canyon Fire had burned 6,181 acres and become one of the most damaging fires in Colorado's history.

Drift Smoke

Loss and Renewal in a Land of Fire *University of Nevada Press*

David Strohmaier’s long career as a firefighter has given him intimate knowledge of wildfire and its complex role in the natural world of the American West. It has also given him rare understanding of the painful losses that are a consequence of fire. Strohmaier addresses our ambivalence about fire and the realities of loss to it—of life, human and animal, of livelihoods, of beloved places. He also examines the process of renewal that is yet another consequence of fire, from the infusion of essential nutrients into the soil, to the sprouting of seeds that depend on fire for germination, to the renewal of species as the land restores itself. Ultimately, according to Strohmaier, living with fire is a matter of choices, of “seeing the connection between loss on a personal scale and loss on a landscape scale: in relationship with persons, and in relationship to and with the land.” We must cultivate a longer perspective, he says, accepting that loss is a part of life and that “humility and empathy and care are not only core virtues between humans but are also essential virtues in our attitudes and actions toward the earth.” *Drift Smoke* is a powerful and moving meditation on wildfire by someone who has seen it in all its terror and beauty, who has lost colleagues and beloved terrain to its ferocity, and who has also seen the miracle of new life sprouting in the ashes. The debate over the role and control of fire in the West will not soon end, but Strohmaier’s contribution to the debate will help all of us better appreciate both the complexity of the issues and the possibilities of hitherto unconsidered solutions that will allow us to inhabit a place where fire is a natural, and needed, part of life.

Fire Management Plan

Sequoia and Kings Canyon National Parks (Classic Reprint) *Forgotten Books*

Excerpt from *Fire Management Plan: Sequoia and Kings Canyon National Parks* Management fires, including both fires of natural origin and prescribed burns, are those fires which contribute to the attainment of the management objectives of a park through execution of predetermined prescriptions defined in detail in a portion of the approved Resources Management Plan. Natural fire is the preferred means to achieve the prescriptions in natural zones. This use of natural ignition may be adopted when analysis of historic fire occurrence, control, and influence indicates that natural fuel loading has not been significantly altered by past management of fire control. It may also be used where the prescription provides for a transition from an altered state back to historic fuel loading. A Canyon Trilogy

Life Before, During and After the Cedar Fire

The crime fiction novelist presents his first novella, *A Lapse of Memory*, based on his short story of the same name. When the mafia wants a mark eliminated, they turn to contract killer James Randall, a.k.a. Richard Johnson, and he usually delivers in spades. But Randall is aging and has developed the early stages of Alzheimer's. When a hit goes horribly wrong, he finds himself on

the run, pursued by his former employers. Gritty, mesmerizing, *A Lapse of Memory* excites us with the chase, while also providing a back-story of a time long gone by. Himself in search of a lost past, the emotionally complex Randall is determined to evade his pursuers. But can he any longer differentiate friend from foe? Can he search out the secrets of his past as the present slips away? The novella is ripe with inventive incidents, is evocative of the present as well as the physical atmosphere of the 1950's, and offers a number of interesting characters. As usual in Curry's work, the presence of the sea and the city is keenly felt and connected to the psychological action of the story.

Wildfire

A Reader *Island Press*

During the summer of 2000, Americans from coast to coast witnessed the worst fire season in recorded history. Daily news reports brought dramatic images of vast swaths of land going up in smoke, from the mountains of Montana and Wyoming, to the scrublands of Texas, to Los Alamos, New Mexico, where a controlled burn gone awry threatened forests, homes, and even our nation's nuclear secrets. As they have for centuries, wildfires captured our attention and our imagination, reminding us of the power of the natural forces that shape our world. In *Wildfire: A Reader* nature writer and wildland firefighter Alianor True gathers together for the first time some of the finest stories and essays ever written about wildfire in America. From Mark Twain to Norman Maclean to Edward Abbey, writers featured here depict and record wildfires with remarkable depth and clarity. An ecological perspective is well represented through the works of John Muir, Aldo Leopold, and John McPhee. Ed Engle, Louise Wagenknecht, and Gretchen Yost, firefighters from the front lines, give us exciting first-person perspectives, reliving their on-the-ground encounters with forest fires. The works gathered in *Wildfire* not only explore the sensory and aesthetic aspects of fire, but also highlight how much attitudes have changed over the past 200 years. From Native Americans who used fire as a tool, to early Americans who viewed it as a frightening and destructive force, to Aldo Leopold and other conservationists whose ideas caused us to rethink the value and role of fire, this rich collection is organized around those shifts in thinking. Capturing the fury and the heat of a raging inferno, or the quiet emergence of wildflowers sprouting from ashes, the writings included in *Wildfire* represent a vital and compelling addition to the nature writing and natural history bookshelf.

Gabriel can't be sure just who's setting the fires in his new real-estate development. When two fires hit back-to-back, he knows it's personal, but any number of competitors or ex-employees could be the arsonist. The police suspect Angel Ramirez, a local teen who's been in trouble before. But Mattie Baker -- a volunteer at the family abuse centre -- just can't believe the kid she's been working with would revert back to his delinquent ways. Determined to convince Gabe that she's right, Mattie must get close to him and find out who's putting their neighbourhood in jeopardy. As the arsonist's flames continue to burn, they find a heat developing between them. It might just turn into a full-fledged fire if they can survive long enough.
