The protocol, therefore, is called TCP/IP. This protocol reserves 1024 ports to determine some higher-order protocols. To allay confusion, note that these specific protocols determine the type of information transmitted, whereas the low-level protocols (TCP/IP) are concerned only with the mechanism of how data is to be transmitted by conditioning the information into smaller chunks called ...

Peggy Fisher explores command-level programming, basic techniques such as managing loops and creating methods, debugging Java code, working with classes and objects, and storing and sorting arrays. Along the way, she investigates the Java API and Java's capabilities for running simulations and algorithm analysis, and issues challenges to write programs that utilize all of these Java features.
