1. Object-Oriented Design vs Procedural Design. Many of you will already be familiar with one or more procedural languages. Examples of such languages are FORTRAN 77, Pascal and C. In the procedural programming paradigm, one focuses on the decomposition of software into various functional components. In other words, the program is organized into a collection of functions, (also known as procedures or subroutines), which will be executed in a defined order to produce the desired result.

Lecture 1: Why object-oriented

design?

Object-Oriented Programming (OOP) is the term used to describe a programming approach based on objects and classes. The object-oriented paradigm allows us to organise software as a collection of objects that consist of both data and behaviour. This is in contrast to conventional functional programming practice that only loosely connects data and behaviour.
