Dissolution testing of solid dosage forms | Clinical Gate

Dissolution testing is a requirement for all solid oral dosage forms and is used throughout the development life-cycle for product release and stability testing. It is a pivotal analytical test used for detecting physical changes in an active pharmaceutical

ingredient and formulated product. At the early stages of the drug development process, in-vitro dissolution testing underpins the optimisation of drug-release from a given formulation.

The role of dissolution in drug development

Ameliorated dissolution rate can be obtained in phenobarbital tablets with 10% gelatine, while 20% of gelatin diminishes the rate of dissolution due to the formation of the thick film. Plasdone, the water-soluble granulator, provides a faster rate of dissolution (Malviya et al., 2011). View chapter Purchase book.

Dissolution - an overview |

ScienceDirect Topics

In the pharmaceutical industry, drug dissolution testing is routinely used to provide critical in vitro drug release information for both quality control purposes, i.e., to assess batch-to-batch consistency of solid oral dosage forms such as tablets, and drug development, i.e., to predict in vivo drug release profiles. There are three typical situations where dissolution testing plays a vital role: formulation and optimization decisions: during product development, for products where dissolution
