Mathematica is set up to deal with complex numbers, although there are some tricks one has to learn. The simplest way to enter i (square root of -1) is as I (upper case I). $z = 2 + 3I$. $2 + 3I$. Note that Mathematica writes I in lowercase in the output. Here's another example:

Complex Analysis with MATHEMATICA (R): Shaw, William T ...

Description. This book presents complex numbers in a state-of-the-art computational

environment. Its innovative approach also offers insights into areas too often neglected in a student treatment, including complex chaos, mathematical art, physics in three or more dimensions, and advanced fluid dynamics. Integration with Mathematica allows topics not usually presentable on a blackboard, such as iterative equation-solving, as well as full graphical exploration of all areas covered.
